

## MEASURE

Shower Door Measurement Guide

## COMPATIBILITY:

Before choosing the right shower/tub door you need to have these measurements and see if it's compatible with our products.

1.) Threshold's **(B2)** overall width measurement, must be at least:

**CATALYST - 3-1/4"**  
**RADIANCE - 2-5/8"**

2.) Measurement of width **(W2 & W1)**, making sure measurements aren't off by more than 3/8". And choosing our product by the width's set, for example:

**Opening: 58 1/2"**

**Choose: 56-60" Size**

3.) Measurement of height **(H2 & H1)**, making sure measurements are plumb, if it's not the same, install the door on a plumb surface, shim the bottom if needed.

Note:

When installing our product, try to install the shower on a plumb surface, attempt to make the surface flat, for instance, if your floor is not flat on both sides, make sure the locations and the header bar is plumb and flat.

This way your doors won't slide open by the force of nature.
