5GHz

On: The extender is connected to the 5GHz wireless network of the host router.

Off: The extender isn't connected to the 5GHz wireless network of the host router.

Option ONE

Quick Setup Using Your Web Browser

Connect to the Extender

FAI 🕢

The extender's default network is TP-Link Extender 2.4GHz/5GHz or TP-LINK Extender 2.4GHz/5GHz.

For Windows Users

- 1. Unplug the Ethernet cable from your computer (if any).
- 2. Click the Wi-Fi icon on the taskbar and connect to the extender's default network.

For Mac OS X Users

- 1. Unplug the Ethernet cable from your Mac (if any).
- 2. Click the Wi-Fi icon in the top right corner of the screen and connect to the extender's default network.

3 Configure

1 Launch a web browser, and enter http://tplinkrepeater.net or http://192.168.0.254 in the address bar. Create a password for future login attempts. and click Start.

If the login window does not appear, please refer to the FAQ > Q1.

Select your router's 2.4GHz/5GHz host network, enter its password, and then click Next.

If your router does not support 5GHz wireless network, please click **Skip** to continue.

3 Either keep the default SSIDs or customize them for the extended networks, and then click **Next**.

4 Verify your wireless settings and click Save. The corresponding LED(s) (2.4GHz/5GHz) should turn solid on.

4 Relocate

- 1 Plug in the extender about halfway between your router and the Wi-Fi dead zone. The location you choose must be within the range of the host patwork.
- Wait until the Signal LED turns solid blue. If not, relocate it closer to the router to achieve better signal quality.

—Blue: Good location Red: Too far away

Router

Option TWO

Quick Setup Using the WPS Button

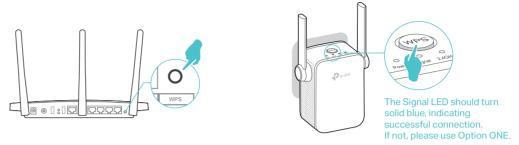

WPS is an easier way to extend your host network. You are recommended to use this way if your host router has a WPS button.

The button might look like one of these: 🅜 | 🕶 | 📞 . Otherwise, please use Option ONE.

Press the WPS button on your router, and then press the WPS button on your extender within 2 minutes.

If you are connecting the extender to a dual band router but only the 2.4GHz or 5GHz LED is on, repeat Step 1 to connect to the other band.

Relocate

- Plug in the extender about halfway between your router and the Wi-Fi dead zone. The location you choose must be within the range of the host network.
- Wait until the Signal LED turns solid blue. If not, relocate it closer to the router to achieve better signal quality.

Enjoy!

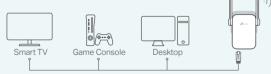

Both extended networks share the same wireless network names (SSIDs) and passwords as those of your host networks.

Entertainment Adapter

The extender can be used as a wireless adapter to connect any Ethernet-only device such as a Blu-ray player, game console, DVR, or smart TV to your Wi-Fi network.

First, connect the extender to your router using Option ONE or Option TWO. Then connect your Ethernet-only device to the extender via an Ethernet cable.

TP-Link Tether App

Tether provides a simple, intuitive way to access and manage your extender with your iOS or Android devices.

. Download the Tether app from the App Store or Google Play 2. Ensure your device is wirelessly connected to the extender or

Turn on/off the LEDs

3. Launch the app and start managing your extended network.

FAQ(Frequently Asked Questions)

- Q1. What should I do if I can't access the web management page of the extender?
 - If your computer is wirelessly connected, make sure that you have connected to the extender's SSID; If your computer is connected via an Ethernet cable, make sure that the connection is stable.
 - Make sure your computer is set to obtain an IP address and DNS server address automatically
 - Verify that http://tplinkrepeater.net or http://192.168.0.254 is correctly entered in the web browser and press Enter.
 - Reset the extender and try again.

Q2. How do I reset the extender?

• With the extender powered on, use a pin to press the RESET button. The LEDs should turn off momentarily, and then release the button.

- Q3. Why doesn't the Signal LED turn solid blue (or red) after I completed Option ONE?
- You may have entered the incorrect Wi-Fi password of your host network during the configuration. Please log in to the extender's web management page to check the password and try again.
- Reset the extender and go through the configuration again.
- Q4. I enabled a wireless MAC filter, wireless access control, or access control list (ACL) on my router, what should I do before configuring and using the
- If you have enabled those features of your host router, you may need to disable them first, and then follow Option ONE or Option TWO to complete the configuration.
